

TREE WIRE GRIP

Galvanized for wire

TREE WIRE GRIPS are used for installation of guy wires, They are produced in standard sizes from 3/16 inch to 3/8 and in conformity with ASTM A.475 or CSA G12 standards. The TREE WIRE GRIPS and cables must have the same direction (left hand). The TREE WIRE GRI of the wire will reach its maximum tensile capacity if the cable is manufactured to specifications of the standard (ASTM A-475 / CSA-G12) grade 180. When initially installed, a maximum three times the TREE WIRE GRIP can be removed or replaced. However, if a problem occurs after more than three months of use, a change is necessary. This product is manufactured to Class A, Grade 180 steel standard (CSA-G12 / ASTM-A475).
